

October 2009

I have been using the 43 foot DX Engineering Vertical Antenna for the past 30 days.

I purchased the complete kit Model DXE-MBVE-1-4UPR. The quality of this product is OUTSTANDING. The installation was made very easy due to the outstanding instruction manual. PERFORMANCE OF THE ANTENNA IS OUTSTANDING.

I installed sixty 33 foot #14 ground radials. I get S9 reports out of Europe, Australia and Japan with 500 watts. I busted the K4M Midway pile up on 20 meters on the 4<sup>th</sup> call with 100 watts.

Over the years I have used beams, wires and verticals. For someone who does not want to spend big bucks on a beam system, the 43 foot vertical is the way to go. If I hear them, I can work them.

Thank you DX Engineering for a quality product. Here are some pictures of my installation.
